## Reading Passage 1

You should spend about 20 minutes on Questions 1-13, which are based on Reading Passage One.

## Fordlandia

Natural latex, or rubber, comes from the sap of rubber trees. Native to the Amazon region of South America, they had long been a Brazilian monopoly, and the boom in wild rubber had made many remote jungle towns rich, until thousands of seeds of the tree were smuggled out by an entrepreneurial Brit, Henry Wickham. These were used to start plantations throughout British East-Asia, where the trees, facing none of their natural insect or fungal enemies, thrived. Thus, the Brazilian rubber boom crashed, leaving control of the world's supplies with the plantation owners in Malaysia (where to this day, most of the world's natural rubber is still produced).

But in the late 1920s, the automobile tycoon, Henry Ford, had a vision. He believed in vertical integration—that is, a supply chain of car parts and products united through his ownership. With his factories producing hundreds of thousands of cars, each of them needing rubber tyres, Ford wanted his own source of rubber and resented dealing with the British plantation interests. He therefore decided to buy a huge tract of Amazonian rainforest, where he would transplant his American workers and lifestyle, in order to make the largest rubber plantation on the planet. It would be called Fordlandia — ambitious, grandiose, and doomed from the beginning.

The first mistake was to hire a rather untrustworthy Brazilian to scout for the best location in the Amazon. This man recommended a damp, rocky, and infertile series of hillsides near the Tapajos river, a tributary of the wide and mighty Amazon. In 1928, Ford blindly acquired a 10,000-square-kilometre concession and immediately ordered an immense amount of infrastructure to be built—at huge cost. To this end, earth-moving equipment arrived, tractors, stump-pullers, trains, prefabricated living quarters, and food-making equipment. The surface jungle was cleared, scores of Ford's employees were relocated, and out of this wilderness sprang an instant slice of America, complete with a modern hospital, library, hotels, ice cream makers, and row upon row of prefabricated houses positioned along nicely paved streets.

The second big mistake was that, incredibly, Ford never thought to consult trained horticulturists. He naively assumed that his own company engineers, who had proven their worth in the production of cars, would prove equally adept at this agricultural endeavour. Thus, they planted the rubber trees thickly together, believing that they would nourish in their home environment. However, in the Amazonian jungle, wild rubber trees are actually few and far between — a defence against the prodigious insect life which chews, drills, sucks, and bites. In such environments, monocultural farming approaches are dubious at best. Ford's young rubber trees had no sooner appeared from the ground than they were attacked by caterpillars, ants, red spiders, and most significantly, South American leaf blight, which, to this day, limits the number of rubber plantations in this, the tree's native land.

The next problem was based on cultural differences. The newly planted fields needed hundreds of local workers, who, although well paid, were expected to follow Ford's patronising vision of a healthy lifestyle. Instead of the local custom of working before and after the roastingly hot middle of the day, Ford's workers were forced to do the standard company 9-to-5 shift. Similarly, they had to eat American food and take part in weekend activities considered sufficiently wholesome, such as poetry reading and square-dancing. Alcohol was strictly forbidden at work, in the housing estates, or within Fordlandia's sphere of influence. After a year denied their local customs, the disgruntled workers had had enough, and a riot followed, leaving the hapless American staff scurrying into the jungle to escape injury. It was all finally quelled with the arrival of the Brazilian army.

After three years, and no significant quantity of rubber to show for it all, Ford did what he should have done from the beginning—hired a trained horticulturist, who ultimately concluded that, in whatever manner the rubber trees were planted, the land was not appropriate for their cultivation. With such humiliating news, anyone less stubborn would have given up, yet Ford purchased another tract of land some fifty miles downstream of the Tapajos river—flatter, drier, better drained, and more suitable for machinery — and started all over again. This time, Ford imported blight-resistant Malaysian rubber trees and much more horticultural expertise. Still, 10 years later, in 1942, the operation could only produce a paltry 750 tons of latex rubber. Ford's factories were hoping for almost 40,000.

The final nail in the coffin was the development of synthetic rubber, and in 1945, it was time to admit defeat, although it was not Ford who did so. By that time he was old and ill and had relinquished control of his company to his grandson, Henry Ford II, who closed down the entire rubber operation. The holdings were sold back to the Brazilian government for a pittance, leaving a loss of over \$20 million (which would be over 10 times that much in today's terms) — a complete and utter financial disaster.

## Questions 1-4

Do the following statements agree with the information given in Reading Passage One?

Write

<b>TRUE</b>	if the statement agrees with the information
<b>FALSE</b>	if the statement contradicts the information
<b>NOT GIVEN</b>	If there is no information on this

- 1  Henry Wickham destroyed the Brazilian rubber boom.
- 2  Rubber trees are well suited to Malaysia.
- 3  The Tapajos river is very wide.
- 4  Fordlandia may have succeeded.

### Questions 5-10

Complete the table.

Choose **NO MORE THAN TWO WORDS** from the passage for each answer.

	Fordlandia's Problems	Result of these
<b>One</b>	first piece of land not 5 <input type="text"/> for rubber trees	no 6 <input type="text"/> of rubber produced
<b>Two</b>	7 <input type="text"/> were infamiliar with farming	an unwise 8 <input type="text"/> approach
<b>Three</b>	not following 9 <input type="text"/>	a 10 <input type="text"/>

### Questions 11-13

Complete the sentences.

Choose **NO MORE THAN TWO WORDS** from the passage for each answer.

The natural enemy of rubber trees is 11

Plantations definitely need the skills of 12

Fordlandia closed down upon the invention of 13

# Reading Passage 2

You should spend about 20 minutes on Questions 14-26, which are based on Reading Passage Two.

## Shakespeare: The Authorship Question

If one were asked to name the greatest writer in the English language, few would hesitate in answering, 'William Shakespeare'. Although he dabbled in poetry, his central claim to fame is his plays, almost 40 of them. Extensively studied, constantly performed, adapted, and reinterpreted into modern contexts, Shakespeare's plays remain as popular as ever. But did he write them, that is the question?

The immediate reaction is to wonder why anyone would even ask this. Although there is little documentary evidence of Shakespeare's life, what does exist unequivocally identifies him as the author of the plays. His name appears on title pages of a few publications, printing orders, and theatrical documents, and is mentioned by contemporary commentators and a fellow playwright, both publicly and in private memoirs, in every case in a way that is consistent with Shakespeare being the author. Consequently, for hundreds of years, no one held any doubts whatsoever on the matter.

There it would have remained, had Shakespeare's post-humous reputation not reached such lofty heights. With the widespread acceptance of his dramatic genius, apparent inconsistencies were perceived. Chief among these was how such literature could originate from, as viewed by some, a humble ill-educated country bumpkin and bawdy stage entrepreneur, about whom so little was known. Details of Shakespeare's schooling and upbringing in the small market town of Stratford-Upon-Avon are non-existent, but among his surviving children there is no evidence of strong education or even basic literacy skills. No original written texts have ever been found, and Shakespeare's six surviving signatures are all unsteady, showing inconsistent style and spelling.

Most tellingly for some are the circumstances of Shakespeare's death. Firstly, there is his will, a commonplace and unpoetic document, making no mention whatsoever of the considerable body of papers, reference books, and miscellaneous plays, poetry, and writings that one would expect a playwright of Shakespeare's stature to possess. Apparently he was unconcerned about the rights to both his own plays (many of which remained unpublished at that time) and his own literary heritage. The second fact is that, upon his death, there were no eulogies, mourning notices, or testimonies from those who knew him. All this seems very perplexing for a playwright and poet who, whilst not necessarily considered the most polished, professional, or learned by his peers, had nevertheless achieved considerable wealth, respect, and fame, even in his own lifetime.

Such thoughts first became public in the mid-19th century -- and have never really stopped, developing the grand title, 'The Shakespeare authorship question', and dividing those interested into two sides: the Stratfordians: those who support Shakespeare as the author, and the anti-Stratfordians: those who do not. For the latter body, the only way to overcome the documentary evidence in support of Shakespeare's authorship is to assume a conspiracy existed among a select group of people, perhaps including Shakespeare himself, in order to protect the real author's identity. So who was he (and in those times, it goes without saying that it could not be a 'she')?

The anti-Stratfordians search for a university-educated, upper-class candidate — someone who would inevitably have had knowledge of aristocratic manners and mores, and familiarity with the proceedings and politics of the royal court, all of which so often appear in the plays themselves. The reason for the conspiracy is that producing such works, full with themes of royal revenge and murder, intrigue and assassination, mob rule and rebellion, could render a nobleman liable to the dangerous charge of subversion. Some have also argued that, at that time, it was considered socially unacceptable for the upper-class to publish creative literature for monetary gain, being instead confined to circulating their writings among their peers, or seeing them performed among courtly audiences.

There are four leading contenders. Sir Francis Bacon was the first nominated, and certainly had the best intellectual credentials, being well-versed in law, philosophy, essay writing, and science. However, since the 1920s, Edward de Vere, an aristocratic earl who patronised and sponsored actors and the arts, has become the leading contender. Only slightly less favoured is a fellow playwright, Christopher Marlowe. Born into the same social class as Shakespeare, he at least went to university, although his early death in a tavern brawl presents difficulties — unless one assumes his demise was fabricated to allow him to continue writing under Shakespeare's name. Finally, there is William Stanley, another aristocratic earl. Contemporary accounts attest to the fact that he wrote plays for the common people, and throughout his life he displayed interest and support for the theatre.

And the evidence? Mere historical and literary conjecture, vague similarities in writing styles, and loose coincidences between the lives and travels of these contenders when compared to the scenes and settings of many of the plays in question. In other words, nothing solid at all. The case is so flimsy that reputable scholars barely discuss it, and rightly so. Although capable of attracting public interest and selling books, unless some real evidence emerges, I would say that the authorship question is not questionable at all.

## Questions 14-17

Write **TRUE**, **FALSE**, or **NOT GIVEN**.

<b>TRUE</b>	if the statement agrees with the information
<b>FALSE</b>	if the statement contradicts the information
<b>NOT GIVEN</b>	If there is no information on this

- 14  Shakespeare's name appears on many documents.
- 15  He was considered a genius even in his lifetime.
- 16  He was well-educated.
- 17  When he died, not all the plays had been published.

## Questions 18-21

Complete the sentences.

Choose **ONE WORD** from the passage for each answer.

We have six examples of Shakespeare's 18 \_\_\_\_\_

He used ordinary language in his 19 \_\_\_\_\_

The lack of public grieving upon his death is 20 \_\_\_\_\_

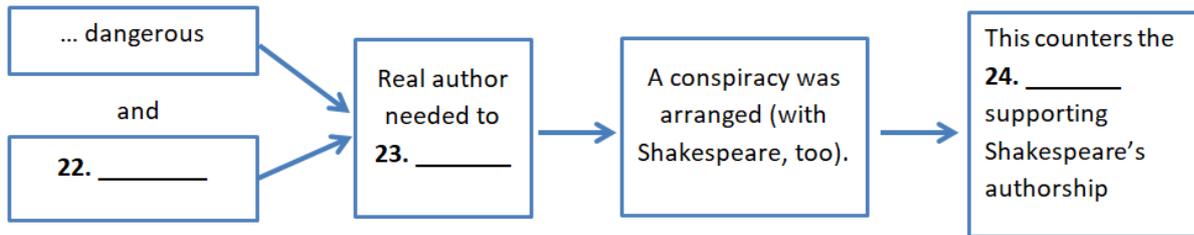

Those who believe Shakespeare was not the author are called 21 \_\_\_\_\_

## Questions 22-24

Complete the flowchart.

### The argument for an Aristocratic author

Writing commercial plays was ...

Choose **NO MORE THAN THREE WORDS** from the passage for each answer.

22 \_\_\_\_\_

23 \_\_\_\_\_

24 \_\_\_\_\_

### Questions 25-26

Choose the correct letter, A, B, C, or D.

25 Which sentence was mentioned in the reading passage?

- A Sir Francis Bacon was the smartest of the candidates.
- B Edward de Vere was in the same social class as Shakespeare.
- C Christopher Marlowe is the prime candidate.
- D William Stanley wrote plays for courtly audiences.

26 The author believes that Shakespeare

- A did not write the plays.
- B may not have written the plays.
- C probably wrote the plays.
- D certainly wrote the plays.

# Reading Passage 3

You should spend about 20 minutes on Questions 27-40, which are based on Reading Passage Three.

## The Immunisation Controversy

**A.** Carl Sagan once said, ‘Science loses ground to pseudo-science because the latter seems to offer more comfort.’ Yes, hard science, proven facts, and indisputable logic are often not sufficiently consoling, and thus routinely eliminated from the equation. Never, though, has this been more distressing than with the so-called ‘anti-vaccination’ movement. The end result has been the needless death of very young children, the most helpless of bystanders, and yet it seems there is no end in sight.

**B.** It is strange to believe that vaccination, with such a long and distinguished track record, is now under assault. Smallpox, for example, had killed over half a billion human beings throughout history but was eradicated — completely removed from the face of the Earth — via immunisation programs. Similarly, polio, rubella, whooping cough, measles, and a slew of other diseases which routinely decimated the youth are now, virtually, things of the past. The days of high infant mortality, short life spans, and nasty brutish lives are indeed long gone, and we owe it all to this crucial insight into disease prevention.

**C.** And this is part of the problem. With the once terrible epidemics lying outside of human memory, a growing number of people are convinced that vaccinations are no longer necessary, and that the small risk of adverse effects outweighs the benefits. One reason for this belief is that many genetic disorders related to brain impairment often emerge at around two years of age — that is, the same period in which babies receive vaccinations. If one in a hundred babies is destined to develop autism among a vaccinated group, then observable symptoms of the problem will likely appear after a vaccination shot, leading distraught parents to link one event to the other.

**D.** This misattribution is compounded by the Internet, which now hosts a sprawling forum of anti-vaccination lobby groups and their websites, full with unsubstantiated claims, fraudulent research, anecdotal evidence, and the passionate tirades of multitudes, firmly convinced of the correctness of their case. Authority is undermined, statistics ignored, and hard science excluded. Is it so surprising? If creationists and alternative medicine practitioners can gain respectability and widespread public and political support, so too can the pseudo-science of the anti-vaccinationists. When faced with this wave of propaganda, it would be hard for many parents, motivated by the intense desire to protect their children, not to be influenced.

**E.** At this point, it must be clarified that there is no credible evidence whatsoever to support the anti-vaccinationists' claims. Over a score of peer-reviewed studies have found nothing to link the MMR (measles/mumps/rubella) vaccine to autism, or even the more subtle neurological problems, and every reason to continue with vaccinations. The so-called increase in autism so often attributed to vaccinations merely results from more accurate diagnoses. Children who in the past would have been labeled as 'retarded' or 'slow' are now identified as having one of the three main grades of autism (which is probably genetically determined). Yet this argument falls on deaf ears, and the counter-claimants have succeeded in reducing vaccination rates among certain communities to the extent that outbreaks of preventable childhood illnesses (such as polio, meningitis, and measles) are occurring.

**F.** The MMR controversy is a sad case. In 1998, a high-profile paper linked this vaccine to autism. It was later shown that the author was receiving funds from various groups engaged in a lawsuit against vaccine manufacturers, and that the study was both ethically and methodologically faulty. Data had been manipulated, and results misreported. Similar studies found no link whatsoever, and in 2004, the medical journal which hosted the original article formally retracted its conclusion. Yet vaccination rates in the UK had dropped to 80% in the subsequent years. In late 1999, a measles outbreak occurred in North Dublin (which had vaccination rates as low as 60%), resulting in 100 hospitalisations and three deaths.

**G.** One of the key arguments of the anti-vaccinationists is that they have the right to choose their medication. These people attack what they see as the impersonal, intrusive, and uncaring edifice of modern medical science. However, the success of immunisation programs depends on a sufficiently high number of the population being immune, which forces the disease to die out through lack of carriers. If there are enough susceptible individuals to provide a chain of disease transmission, safety is compromised for all, and this is why free choice should not be an issue, particularly when the hard evidence presents an overwhelming case. Personally, I would have thought that when children started dying from preventable diseases, the anti-vaccinationists' case would die also.

**H**. But there are other agendas at play. Anti-vaccinationists can posture as moral crusaders, dismissing those who support immunisation as being in the payment of big pharmaceutical companies, whom they see as dishonest and immoral. Talk show hosts, women's magazines, paid 'experts', lawyers, and media celebrities, all benefit from creating controversy when none existed, while alternative medicine practitioners and snake-oil salesmen all oppose vaccination, believing that their own slew of pills, potions, and unproven expensive treatments do the job better. Against all this, how can rational science prevail?

## Questions 27-33

Reading Passage Three has seven paragraphs, **A-H**.

Choose the correct heading for Paragraphs **B-H** from the list of headings.

Write the correct number, **i-x**, for each answer.

List of Headings	
<b>i</b>	Easy publicity
<b>ii</b>	Increasing outbreaks of disease
<b>iii</b>	Some real reasons
<b>iv</b>	All or nothing
<b>v</b>	Autism on the rise
<b>vi</b>	Past successes
<b>vii</b>	A sad consequence
<b>viii</b>	An unfortunate coincidence
<b>ix</b>	A simple explanation
<b>x</b>	Some dubious evidence

Example	Answer
Paragraph A	..... <b>vii</b> .....

27	<input type="text"/>	Paragraph B
28	<input type="text"/>	Paragraph C
29	<input type="text"/>	Paragraph D

30	<input type="text"/>	Paragraph E
31	<input type="text"/>	Paragraph F
32	<input type="text"/>	Paragraph G
33	<input type="text"/>	Paragraph H

### Questions 34-36

Choose **THREE** answers from the list and write the correct letter, A-G, next to the questions.

For which **THREE** reasons, A-G, do anti-vaccinationists oppose vaccinations?

- A Believing they cause problems
- B Wanting to save money
- C Wanting freedom of choice
- D Not believing drug manufacturers
- E The pain of vaccinations
- F The influence of creationists
- G Preferring alternative medicine

### Questions 37-40

Choose the correct letter, A, B, C, or D.

37 Autism is

- A sometimes caused by vaccinations.
- B a very subtle neurological disorder.
- C most likely inherited.
- D increasing.

38 The 1998 paper was

- A the cause of falling vaccination rates.
- B defended by the medical journal.
- C verified by other studies.
- D funded by patients.

39 Vaccinations

- A have removed most smallpox from the world.
- B are supported by solid evidence.
- C are defended on some websites.
- D are no longer necessary.

40 Alternative medicine practitioners

- A believe vaccinations are generally good.
- B can be impersonal and uncaring.
- C are often supported by politicians.
- D are often quite cheap.

## Solution:

25 A

26 D

1 TRUE

2 TRUE

3 NOT GIVEN

4 FALSE

5 appropriate

6 significant quantity

7 Company engineers

8 monocultural (farming)

9 local customs

10 riot (followed)

11 leaf blight

12 trained horticulturists

13 synthetic rubber

14 FALSE

15 FALSE

16 NOT GIVEN

17 TRUE

- 18 signature(s)
- 19 will
- 20 perplexing
- 21 anti-Stratfordians
- 22 socially unacceptable
- 23 protect (his) identity
- 24 documentary evidence
- 27 vi
- 28 viii
- 29 i
- 30 ix
- 31 x
- 32 iv
- 33 iii
- $\frac{34}{36}$  A,C,D
- 37 C
- 38 A
- 39 B
- 40 C

## Review and Explanations

25 Answer: **A**

Keywords in Questions	Similar words in Passage
<p>Q25: Which sentence was mentioned in the reading passage?</p> <p>A. Sir Francis Bacon was the <b>smartest</b> of the candidates.</p> <p>B. Edward de Vere was in the same social class as Shakespeare.</p> <p>C. Christopher Marlowe is the prime candidate.</p> <p>D. William Stanley wrote plays for courtly audiences.</p>	<p>Sir Francis Bacon was the first nominated, and certainly had <b>the best intellectual</b> credentials, being well-versed in law, philosophy, essay writing, and science.</p>
<p>Note</p> <p>The author says that Sir Francis Bacon “certainly had the best intellectual credentials”, which means that he is the smartest.</p> <p>Also, the contents of B, C, D aren’t mentioned in the passage.</p> <p>For that reason, <b>A</b> is the answer.</p>	

26 Answer: **D**

Keywords in Questions	Similar words in Passage
<p>Q26: The author believes that Shakespeare</p> <p>A. did not write the plays.</p> <p>B. may not have written the plays.</p> <p>C. probably wrote the plays.</p> <p>D. certainly wrote the plays.</p>	<p>Although there is little documentary evidence of Shakespeare’s life, what does exist unequivocally identifies him as the author of the plays.</p>

Note

A. did not write the plays.

B. may not have written the plays.

C. probably wrote the plays.

Compared with the text all 3 choices above are FALSE because in the passage the author mentioned the existence of Shakespeare's plays many times. Moreover, there is an evidence to affirm this in the 2nd sentence of the 2nd passage.

For that reason, **D** is the answer.

1 Answer: **TRUE**

Keywords in Questions	Similar words in Passage
Q1: Henry Wickham destroyed the Brazilian rubber boom.	the boom in wild rubber had made many remote jungle towns rich, until thousands of seeds of the tree were smuggled out by an entrepreneurial Brit, Henry Wickham. These were used to start plantations throughout British East-Asia, where the trees, facing none of their natural insect or fungal enemies, thrived. Thus, the Brazilian rubber boom crashed, leaving control of the world's supplies with the plantation owners in Malaysia
Note: Considering every details in the question and in the passage, we can conclude that Q1 is confirmed in the passage. For that reason, the answer is <b>TRUE</b>	

2 Answer: **TRUE**

Keywords in Questions	Similar words in Passage
Q2: Rubber trees are well suited to Malaysia.	The Brazilian rubber boom crashed, leaving control of the world's supplies with the plantation owners in Malaysia (where to this day, most of the world's natural rubber is still produced).
Note: Considering every details in the question and in the passage, we can conclude that Q2 is confirmed in the passage. For that reason, the answer is <b>TRUE</b>	

3 Answer: **NOT GIVEN**

Keywords in Questions	Similar words in Passage
Q3: The Tapajos river is very wide.	This man recommended a damp, rocky, and infertile series of hillsides near the Tapajos river, a tributary of the wide and mighty Amazon.

Note

The word "The Tapajos" is mentioned 1 time in the whole passage, and in the sentence including "The Tapajos", "very wide" is used to describe "series of hillsides near the Tapajos river"

So the answer is **NOT GIVEN**

4 Answer: **FALSE**

Keywords in Questions	Similar words in Passage
Q4: Fordlandia may have succeeded.	It would be called Fordlandia — ambitious, grandiose, and doomed from the beginning.

Note:

Question: Fordlandia may have succeeded.

Passage : It would be called Fordlandia — ambitious, grandiose, and doomed from the beginning.

For that reason, the answer is **FALSE**

5 Answer: **appropriate**

Keywords in Questions	Similar words in Passage
Q5: first piece of land not _____ for rubber trees	Ford did what he should have done from the beginning—hired a trained horticulturist, who ultimately concluded that, in whatever manner the rubber trees were planted, the land was not appropriate for their cultivation

Note: Here we must find an adjective, which can clarify the relation between "the first piece of land" and "rubber trees"

The text "Ford did what he should have done from the beginning—hired a trained horticulturist, who ultimately concluded that, in whatever manner the rubber trees were planted, the land was not appropriate for their cultivation" shows us that "appropriate" is the word we are looking for.

For that reason, the answer is **appropriate**

6 Answer: **significant quantity**

Keywords in Questions	Similar words in Passage
Q6: no _____ of rubber produced	After three years, and no significant quantity of rubber to show for it all, Ford did what he should have done from the beginning—hired a trained horticulturist, who ultimately concluded that, in whatever manner the rubber trees were planted, the land was not appropriate for their cultivation.

Note:

Here we must find a noun, which relates to “the rubber produced” to shows “the result of first piece of land not appropriate for rubber trees”(mentioned in Q5)

The text above shows us that " significant quantity" is the word we are looking for.

For that reason, the answer is **significant quantity**

### 7 Answer: **Company engineers**

Keywords in Questions	Similar words in Passage
Q7:_____ were unfamiliar with farming malfunction.	The second big mistake was that, incredibly, Ford never thought to consult trained horticulturists. He naively assumed that his own company engineers, who had proven their worth in the production of cars, would prove equally adept at this agricultural endeavour. Thus, they planted the rubber trees thickly together, believing that they would nourish in their home environment. However, in the Amazonian jungle, wild rubber trees are actually few and far between — a defence against the prodigious insect life which chews, drills, sucks, and bites. In such environments, monocultural farming approaches are dubious at best. Ford’s young rubber trees had no sooner appeared from the ground than they were attacked by caterpillars, ants, red spiders, and most significantly, South American leaf blight, which, to this day, limits the number of rubber plantations in this, the tree’s native land.

Note: In the passage, the author mentioned that “Ford never thought to consult trained horticulturists” because he thought that they was good at agriculture as well as the production of cars. This resulted in “young rubber trees had no sooner appeared from the ground than they were attacked by caterpillars, ants, red spiders, and most significantly, South American leaf blight”

=> Every details in the passage demonstrates that was “farming malfunction”

The text above shows us that " Company engineers" is the word we are looking for.

For that reason, the answer is **Company engineers**

### 8 Answer: **monocultural (farming)**

Keywords in Questions	Similar words in Passage
Q8: an unwise _____ approach	In such environments, monocultural farming approaches are dubious at best.

Note

Here we must find a noun phrase, a name of the approach which is unwise

Also, in the passage, we can see that "dubious at best" is a synonym for "unwise"

According to the text "monocultural (farming)" is the word we are looking for.

For that reason, the answer is **monocultural (farming)**

**9 Answer: local customs**

Keywords in Questions	Similar words in Passage
Q9. not following _____	After a year denied their local customs, the disgruntled workers had had enough, and a riot followed, leaving the hapless American staff scurrying into the jungle to escape injury.

Note

Here we must find a noun phrase to show the third Fordlandia's problem. Moreover, in Q9, "not following" is similar to "denied" in the passage.

According to the text "local customs" is the word we are looking for.

For that reason, the answer is **local customs**

**10 Answer: riot (followed)**

Keywords in Questions	Similar words in Passage
Q10. a _____	After a year denied their local customs, the disgruntled workers had had enough, and a riot followed, leaving the hapless American staff scurrying into the jungle to escape injury.

Note

Here we must find a noun, which is the result of the third Fordlandia's problem (mentioned in Q9)

Compared with the text, "riot (followed)" is the word we are looking for.

For that reason, the answer is **riot (followed)**

**11 Answer: leaf blight**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

<p>Q11.</p> <p>The natural enemy of rubber trees is _____</p>	<p>Ford's young rubber trees had no sooner appeared from the ground than they were attacked by caterpillars, ants, red spiders, and most significantly, South American leaf blight, which, to this day, limits the number of rubber plantations in this, the tree's native land.</p>
<p>Note:</p> <p>In the passage, it is stated that there are lots of enemies of rubber trees. However, here we must find a singular noun.</p> <p>Compared with the text, "leaf blight" is the word we are looking for.</p> <p>Therefore, the answer is leaf blight</p>	

**12 Answer: trained horticulturists**

Keywords in Questions	Similar words in Passage
<p>Q12.</p> <p>Plantations definitely need the skills of _____</p>	<p>The second big mistake was that, incredibly, Ford never thought to consult trained horticulturists.</p>
<p>Note:</p> <p>In the passage, it is stated that "Ford never thought to consult trained horticulturists" is the second big mistake.</p> <p>So considering every details in the question and in the passage, the answer is trained horticulturists</p>	

**13 Answer: synthetic rubber**

Keywords in Questions	Similar words in Passage
<p>Q13. Fordlandia closed down upon the invention of _____</p>	<p>The final nail in the coffin was the development of synthetic rubber, and in 1945, it was time to admit defeat, although it was not Ford who did so. By that time he was old and ill and had relinquished control of his company to his grandson, Henry Ford II, who closed down the entire rubber operation.</p>
<p>Note</p> <p>Here we must find a noun to show when Fordlandia was closed down</p> <p>According to the passage "synthetic rubber" is the word we are looking for.</p> <p>Therefore, the answer is synthetic rubber</p>	

**14 Answer: FALSE**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

Q 14 : Shakespeare's name appears on many documents.	His name appears on title pages of a few publications, printing orders, and theatrical documents
<p>Note:</p> <p>Considering every details in the question and in the passage, we can conclude that Q14 is confirmed in the passage. Hence, the answer is <b>FALSE</b></p>	

**15 Answer: FALSE**

Keywords in Questions	Similar words in Passage
Q15: He was considered a genius even in his lifetime.	There it would have remained, had Shakespeare's posthumous reputation not reached such lofty heights
<p>Note:</p> <p>Considering every details in the question and in the passage, we can conclude that Q15 is confirmed in the passage. Hence, the answer is <b>FALSE</b></p>	

**16 Answer: NOT GIVEN**

Keywords in Questions	Similar words in Passage
Q16: He was well-educated.	Details of Shakespeare's schooling and upbringing in the small market town of Stratford-Upon-Avon are non-existent
<p>Note:</p> <p>In the passage, the author doesn't mention Shakespeare's schooling so we can't conclude that he was well-educated as in Q16</p> <p>Hence, the answer is <b>NOT GIVEN</b></p>	

**17 Answer: TRUE**

Keywords in Questions	Similar words in Passage
Q17: When he died, not all the plays had been published.	Most tellingly for some are the circumstances of Shakespeare's death. Firstly, there is his will, a commonplace and unpoetic document, making no mention whatsoever of the considerable body of papers, reference books, and miscellaneous plays, poetry, and writings that one would expect a playwright of Shakespeare's stature to possess

Note:

Considering every details in the question and in the passage, we can conclude that Q17 is confirmed in the passage. Hence, the answer is **TRUE**

**18 Answer: signature(s)**

Keywords in Questions	Similar words in Passage
Q18: We have six examples of Shakespeare's _____	No original written texts have ever been found, and Shakespeare's six surviving signatures are all unsteady, showing inconsistent style and spelling.
Note: Here we must find a noun to show six examples which Shakespeare has. According to the text "signature(s)" is the word we are looking for. For that reason, the answer is <b>signature(s)</b>	

**19 Answer: will**

Keywords in Questions	Similar words in Passage
Q19: He used ordinary language in his _____	Firstly, there is his will, a commonplace and unpoetic document, making no mention whatsoever of the considerable body of papers, reference books, and miscellaneous plays, poetry, and writings that one would expect a playwright of Shakespeare's stature to possess.
Note: Here we must find a noun to show something in which Shakespeare use ordinary language According to the text "will" is the word we are looking for. For that reason, the answer is <b>will</b>	

**20 Answer: perplexing**

Keywords in Questions	Similar words in Passage
Q20: The lack of public grieving upon his death is _____	The second fact is that, upon his death, there were no eulogies, mourning notices, or testimonies from those who knew him. All this seems very perplexing for a playwright and poet

Note:

Here we must find a noun or an adjective to show what is the lack of public grieving upon his death. According to the text "perplexing" is the word we are looking for.

For that reason, the answer is **perplexing**

## 21 Answer: **anti-Stratfordians**

Keywords in Questions	Similar words in Passage
Q21: Those who believe Shakespeare was not the author are called _____	Such thoughts first became public in the mid-19th century -- and have never really stopped, developing the grand title, 'The Shakespeare authorship question', and dividing those interested into two sides: the Stratfordians: those who support Shakespeare as the author, and the anti-Stratfordians: those who do not.

Note:

Here we must find a noun to show the name of those who believe Shakespeare was not the author. According to the text "anti-Stratfordians" is the word we are looking for.

For that reason, the answer is **anti-Stratfordians**

## 22 Answer: **socially unacceptable**

Keywords in Questions	Similar words in Passage
Q22: Writing commercial plays was dangerous and _____	The reason for the conspiracy is that producing such works, full with themes of royal revenge and murder, intrigue and assassination, mob rule and rebellion, could render a nobleman liable to the dangerous charge of subversion. Some have also argued that, at that time, it was considered socially unacceptable for the upper-class to publish creative literature for monetary gain, being instead confined to circulating their writings among their peers, or seeing them performed among courtly audiences.

Note:

Here we must find an adjective to describe "writing commercial plays". According to the text "socially unacceptable" is the word we are looking for.

For that reason, the answer is **socially unacceptable**

## 23 Answer: **protect (his) identity**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

Q 23: Real author needed to _____	For the latter body, the only way to overcome the documentary evidence in support of Shakespeare's authorship is to assume a conspiracy existed among a select group of people, perhaps including Shakespeare himself, in order to protect the real author's identity.
-----------------------------------	--

Note

Here we must find a verb to show what "real author" needed to do. Compared with the text, "protect (his) identity" is the word we are looking for.

For that reason, the answer is **protect (his) identity**

**24 Answer: documentary evidence**

Keywords in Questions	Similar words in Passage
Q24: This counters the _____ supporting Shakespeare's authorship	Although there is little documentary evidence of Shakespeare's life, what does exist unequivocally identifies him as the author of the plays.

Note:

Here we must find a noun to show the result of the arranged conspiracy (with Shakespeare). According to the text "documentary evidence" is the word we are looking for.

For that reason, the answer is **documentary evidence**

**27 Answer: vi**

Keywords in Questions	Similar words in Passage
<p>To do matching heading question, we should use skimming technique, which means having a quick look at the passage as a whole in order to understand its meaning and structure.</p> <p>After skimming the whole passage, you turn back to look at each paragraph in details. From my point of view, it would be better to read a paragraph carefully and try to guess its main idea (the idea explained in every single sentence of the question). The topic sentence is a great clue but in some cases it is not used in the paragraph.</p>	

<p>Q27: Matching headings</p> <p>vi: Past successes</p>	<p>It is strange to believe that vaccination, with such a long and distinguished track record, is now under assault. Smallpox, for example, had killed over half a billion human beings throughout history but was eradicated — completely removed from the face of the Earth — via immunisation programs. Similarly, polio, rubella, whooping cough, measles, and a slew of other diseases which routinely decimated the youth are now, virtually, things of the past.</p>
---	---

Note:

In the first sentence of paragraph B the author mentions that vaccination is now under assault. But the other sentences tell about advantage of vaccination, which was eradicating lots of disease epidemics in the past.

The main idea of passage B is similar to option vi. For that reason, the answer is vi.

**28 Answer: viii**

Keywords in Questions	Similar words in Passage
<p>Q28: Matching Headings</p> <p>viii: An unfortunate coincidence</p>	<p>. One reason for this belief is that many genetic disorders related to brain impairment often emerge at around two years of age — that is, the same period in which babies receive vaccinations. If one in a hundred babies is destined to develop autism among a vaccinated group, then observable symptoms of the problem will likely appear after a vaccination shot</p>

Note:

Paragraph C tells that what makes people believe “vaccinations are no longer necessary”. All of the sentences in this paragraph shows that it is “an unfortunate coincidence”

For that reason, the answer is viii.

**29 Answer: i**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

<p>Q29: Matching Headings</p> <p>i: Easy publicity</p>	<p>This misattribution is compounded by the Internet, which now hosts a sprawling forum of anti-vaccination lobby groups and their websites, full with unsubstantiated claims, fraudulent research, anecdotal evidence, and the passionate tirades of multitudes, firmly convinced of the correctness of their case.</p>
<p>Note:</p> <p>Paragraph D shows us that there are various ways on the Internet which we can get information about anti-vaccination</p> <p>The main idea of passage D is similar to option i. For that reason, the answer is i.</p>	

**30 Answer: ix**

Keywords in Questions	Similar words in Passage
<p>Q30: Matching Headings</p> <p>ix: A simple explanation</p>	<p>At this point, it must be clarified that there is no credible evidence whatsoever to support the anti-vaccinationists' claims. Over a score of peer-reviewed studies have found nothing to link the MMR (measles/mumps/rubella) vaccine to autism, or even the more subtle neurological problems, and every reason to continue with vaccinations. The so-called increase in autism so often attributed to vaccinations merely results from more accurate diagnoses.</p>
<p>Note:</p> <p>The main idea of paragraph E is about the explanation for no credible evidence to support the anti-vaccinationists claims.</p> <p>For that reason, we can conclude that the answer is ix</p>	

**31 Answer: x**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

<p>Q31: Matching Headings</p> <p>x: Some dubious evidence</p>	<p>Data had been manipulated, and results misreported. Similar studies found no link whatsoever, and in 2004, the medical journal which hosted the original article formally retracted its conclusion. Yet vaccination rates in the UK had dropped to 80% in the subsequent years. In late 1999, a measles outbreak occurred in North Dublin (which had vaccination rates as low as 60%), resulting in 100 hospitalisations and three deaths.</p>
<p>Note:</p> <p>The main idea of passage F are the MMR controversy and some dubious evidence about this controversy.</p> <p>For that reason, the answer is x</p>	

**32 Answer: iv**

Keywords in Questions	Similar words in Passage
<p>Q32: Matching Headings</p> <p>iv: All or nothing</p>	<p>However, the success of immunisation programs depends on a sufficiently high number of the population being immune, which forces the disease to die out through lack of carriers. If there are enough susceptible individuals to provide a chain of disease transmission, safety is compromised for all, and this is why free choice should not be an issue, particularly when the hard evidence presents an overwhelming case. Personally, I would have thought that when children started dying from preventable diseases, the anti-vaccinationists' case would die also.</p>
<p>Note:</p> <p>The main idea of passage G tells that both of the benefit and the cause of immunisation programs appear at the same time.</p> <p>The main idea of passage G is similar to option iv. For that reason, the answer is iv.</p>	

**33 Answer: iii**

Keywords in Questions	Similar words in Passage
-----------------------	--------------------------

<p>Q33: Matching Headings</p> <p>iii: Some real reasons</p>	<p>But there are other agendas at play. Anti-vaccinationists can posture as moral crusaders, dismissing those who support immunisation as being in the payment of big pharmaceutical companies, whom they see as dishonest and immoral. Talk show hosts, women's magazines, paid 'experts', lawyers, and media celebrities, all benefit from creating controversy when none existed, while alternative medicine practitioners and snake-oil salesmen all oppose vaccination, believing that their own slew of pills, potions, and unproven expensive treatments do the job better. Against all this, how can rational science prevail?</p>
<p>Note:</p> <p>The whole paragraph focuses on reasons why some people oppose vaccination.</p> <p>Therefore, the answer is <b>iii</b>.</p>	

**34-36 Answer: A,C,D**

Keywords in Questions	Similar words in Passage
<p>Q 34 - 36: For which THREE reasons, A-G, do anti-vaccinationists oppose vaccinations?</p> <p>A. Believing they cause problems</p> <p>B. Wanting to save money</p> <p>C. Wanting freedom of choice</p> <p>D. Not believing drug manufacturers</p> <p>E. The pain of vaccinations</p> <p>F. The influence of creationists</p> <p>G. Preferring alternative medicine</p>	<p>But there are other agendas at play. Anti-vaccinationists can posture as moral crusaders, dismissing those who support immunisation as being in the payment of big pharmaceutical companies, whom they see as dishonest and immoral. Talk show hosts, women's magazines, paid 'experts', lawyers, and media celebrities, all benefit from creating controversy when none existed, while alternative medicine practitioners and snake-oil salesmen all oppose vaccination, believing that their own slew of pills, potions, and unproven expensive treatments do the job better. Against all this, how can rational science prevail?</p>
<p>Note:</p> <p>Considering every details in the question and in the paragraph H, we can conclude that Q34-36 are confirmed in the passage.</p> <p>For that reason, the answer is <b>A,C,D</b></p>	

**37 Answer: C**

To answer Q37 - Q40, we can use scanning technique. The keywords to look for while scanning are the content words in the question. The information needed to answer the question will be around the content words.

In case the content words appear too many times in the passage, we can try to guess its location (as we skimmed all over the passage to answer the previous questions, clues of the information location already exist in our mind). By doing that, we reduce the number of words to read carefully when finding the needed information, hence saving a lot of time.

Keywords in Questions	Similar words in Passage
<p>Q37: Choose the correct letter, A, B, C, or D.</p> <p>Autism is</p> <p>A. sometimes caused by vaccinations.</p> <p>B. a very subtle neurological disorder.</p> <p>C. most likely inherited.</p> <p>D. increasing.</p>	<p>If one in a hundred babies is destined to develop autism among a vaccinated group, then observable symptoms of the problem will likely appear after a vaccination shot</p>
<p>Note</p> <p>In the paragraph H we can see that the symptoms of autism “will likely appear after a vaccination shot”.</p> <p>For that reason the answer is C.</p>	

**38 Answer: A**

Keywords in Questions	Similar words in Passage
<p>Q38: Choose the correct letter, A, B, C, or D.</p> <p>The 1998 paper was</p> <p>A. the cause of falling vaccination rates.</p> <p>B. defended by the medical journal.</p> <p>C. verified by other studies.</p> <p>D. funded by patients.</p>	<p>In 1998, a high-profile paper linked this vaccine to autism. It was later shown that the author was receiving funds from various groups engaged in a lawsuit against vaccine manufacturers, and that the study was both ethically and methodologically faulty. Data had been manipulated, and results misreported. Similar studies found no link whatsoever, and in 2004, the medical journal which hosted the original article formally retracted its conclusion. Yet vaccination rates in the UK had dropped to 80% in the subsequent years. In late 1999, a measles outbreak occurred in North Dublin (which had vaccination rates as low as 60%), resulting in 100 hospitalisations and three deaths.</p>

Note:

The keywords to used in scanning is “the 1998 paper”, which appear in paragraph F. Also, in this paragraph, the author mentions the 1998 paper is the reason to cause falling vaccination rates.

Considering all the given information, we can conclude that the answer is **A**.

### 39 Answer: **B**

Keywords in Questions	Similar words in Passage
Q39: Choose the correct letter, A, B, C, or D. Vaccinations A. have removed most smallpox from the world. B. <b>are supported</b> by <b>solid evidence</b> . C. are defended on some websites. D. fare no longer necessary.	Over a score of peer-reviewed studies have <b>found nothing to link the MMR (measles/mumps/rubella) vaccine to autism, or even the more subtle neurological problems, and every reason to continue with vaccinations</b>
Note: We can see that there are lots of evidences to support vaccinations in paragraph E. Considering all the given information, we can conclude that the answer is <b>B</b>	

### 40 Answer: **C**

Keywords in Questions	Similar words in Passage
Q40: Choose the correct letter, A, B, C, or D. <b>Alternative medicine practitioners</b> A believe vaccinations are generally good. B can be impersonal and uncaring. C are often <b>supported by politicians</b> . D are often quite cheap.	If creationists and <b>alternative medicine practitioners</b> can gain respectability and widespread public and <b>political support</b> , so too can the pseudoscience of the anti-vaccinationists.
Note: It is stated that alternative medicine practitioners appear in paragraph D. All thing considered, we can conclude that the answer is <b>C</b>
